-----

This is Micro Submersible Water Pump DC 3V-5V, which can be easily ...

This semi-submersible pump is a 3V Water Pump that uses electricity generated from a solar panel or fuel cell to create a steady stream of water. This load is ...

The DC 3V/5V Mini Water Pump Module is a compact, low-voltage micro submersible pump designed for precision liquid circulation in small-scale electronic and DIY applications. It operates safely on ...

Compact size: Small size allows you to get more free play space. It is easy to install and remove.  
Energy-saving: Low power consumption, ...

The pump is basically a DC motor that is powered with 3V and draws 100mA. When powered, the pump sucks water in from the side of the plastic casing and pushes it out the tubing port.

Types of Mini Solar Water Pumps A mini solar water pump is an energy-efficient, eco-friendly solution for moving water using solar power. These systems are ideal for remote areas, off-grid applications, and ...

Discover the practical uses, setup, and maintenance of mini pump 3V DC for small water features, aquariums, and DIY projects. Learn how to choose the right model based on flow rate, size, and ...

Micro mini water pump, liquid pump, the motor adopts M20 micro motor. which is a diaphragm pump that can self suction and be used as a micro ...

Mini submersible pump DC 3V-5V for Arduino, DIY watering, and fountain projects. Compact, quiet, and easy to use in small water circulation systems.
