---

Solar energy utilization in the aviation industry has a rich history dating back several decades. The first significant milestone in solar-powered ...

A Swiss pilot just set a record for the highest solar-powered flight, showing a clean-energy possibility for aviation.

Those are the types of aircraft being developed now that are bringing the dream of solar-powered flight closer to reality, with planes that act very ...

At Airbus, we are working to use this alternative renewable energy source to power high-endurance stratospheric flight. Our advances in solar cell technology ...

Utilizing solar energy and thermal currents, the HB-SXA ascended to the record height, crossing paths with a commercial airliner during the flight--a ...

Skydweller Aero is working toward turning this vision into reality with its innovative solar-powered plane. As the world's largest unmanned solar ...

The solar-powered HALE aircraft design is a combination of multiple technologies that require multiple design decisions within the design space. A ...

Solar-powered planes won't be flying people to their next vacation spot anytime soon. But these prototypes, most of which operate without humans, could lead to new alternatives for aerial ...

These aircraft, equipped with photovoltaic cells that can capture and convert solar energy with up to 23% efficiency, represent a compelling solution ...
