Base station antennas are installed in such a way that radio-wave exposure in public areas is well below the established safety limits. Mobile phones and other mobile devices require a network of base ...

Nokia's multi-PON fiber broadband solution allows Baktelecom to bring new multi-gigabit services to residential and business customers across Azerbaijan. The network upgrade starts with the ...

Thus, in order to provide services to more users, Baktelecom is now strengthening the network by increasing the capacity of the existing 140 base stations.

presents a following method: location selection and network optimization for the wireless communication network. First, it collects the experimental data set of base station locati.

A base transceiver station (BTS) or a baseband unit (BBU) is a piece of equipment that facilitates wireless communication between user equipment (UE) and a network. UEs are devices like mobile phones (handsets), WLL phones, computers with wireless Internet connectivity, or antennas mounted on buildings or telecommunication towers. The network can be that of any of the wireless communication technologies like GSM, CDMA, wireless local loop, Wi-Fi, WiMAX or other wide area network (WAN) techn...

Wireless Communication Service is provided on the basis of LTE (Long Term Evolution) technology by Baku Telephone Communications LLC. This ...

Azercell was the first to introduce 4G services in Azerbaijan and has since expanded its 4G network to nearly 60 regions, including Baku and the Absheron Peninsula.

A terminal according to one aspect of the present disclosure comprises a control unit that measures a subset of reference signals (RS) predicted for performance monitoring, and a ...

Baku wireless communication network base station

It is to design a wireless communication base station monitoring system based on artificial intelligence and network security.
