Is it okay to have an odd number of panels in my solar array? I only see systems with an even number of panels. I would run them in parallel. Thanks...

I have space for 7 x 40Voc 355W panels on my roof going into an Easysolar 5000 and 2 x Pylontech 48/3000 batteries. I can envisage only 6 panels connecting to the 150/100 MPPT at 80v or ...

Nearly seven in 10 solar panel owners we surveyed have had no technical problems with their solar panel system since it was installed. Among those who did report a technical fault, inverter ...

Can solar photovoltaic panels be used in odd numbers

All even numbers and some odd numbers (like 9) are just fine. You have a prime number, with no divisors other than itself and 1, and that is what limits your options.

I need at least two cells in series to have the voltage for the SPV1040 MPPT IC and would like to use all available space on the board, this is ...

I've never seen anything definitive so maybe its not an issue, but is there any requirement to only design systems with even numbers of solar panels?

Can I combine them in series-parallel in any manner with an odd number of panels, say 2 series of 2 and a single 12v or would I need to get a 6th panel?
