Unlike traditional panels with opaque backs, our bifacial design harnesses extra solar energy from the rear, increasing your total power output by up to 30%. Get more clean energy and ...

John Hingley and his team at the renewable energy company Renovagen designed a high power PV array that rolls out like a carpet.

European startup Sun-Ways has introduced a novel solar panel system that could pave the way for renewable energy production along railway ...

The Massachusetts Institute of Technology has introduced an ultra-thin photovoltaic "paper" that can be applied to almost any surface. The new solar material is thinner than a human ...

MIT researchers have made solar panels thinner than human hair that provide 18 times as much power per kilogram as today's glass and silicon-based solar panels.

Together we have designed a high quality photovoltaic textile: lightweight, foldable, furlable, and "Made in France". It has already crossed oceans, breached the atmosphere and is constantly finding new ...

This innovative technology integrates solar panels into textiles, allowing users to harness solar energy while wearing clothing or accessories. In ...

One of the most promising technologies in this field is ultra thin solar panels, which can not only be integrated into traditional surfaces, but also into flexible materials such as fabrics. This leap in ...

PVFloor provides both energy saving and an aesthetic solution with its innovative energy-generating solar panels used as floor covering. With its durable and efficient structure, PVFloor can be used in ...
