According to the Centre for Research on Energy and Clean Air China energy and emissions trends: March 2025 snapshot, in February 2025, China's power generation declined for the first time since ...

A complete phase-out of fossil-fuel power generation technologies in China appears unlikely in the study period. Gas-fired and coal-fired power generation are the pillar forms of power ...

While power demand grew by 2.5% overall, there was a 4.7% drop in thermal power generation - mainly coal and gas. Increases in solar, wind and nuclear power generation, driven by investments in new ...

In 2023, China's new energy investment grew rapidly, the investment in solar PV exceeded 670 billion CNY, while the investment in wind power exceeded 380 billion CNY.

New coal-fired power generation at record levels - coal continues to grow despite the solar and wind boom
With 52 new large-scale power plants, China added a total of 78 gigawatts of new ...

China's clean energy industries drove more than 90% of the country's investment growth last year, making the sectors bigger than all but seven of the world's economies, a new analysis has...

Addressing concerns over grid reliability following previous power shortages, the country commissioned nearly 70 GW of new clean coal-fired capacity--the highest annual addition since ...

China's surge in renewables and whole-economy electrification is rapidly reshaping energy choices for the rest of the world, creating the conditions for a decline in global fossil fuel use. Clean generation ...

More than 100 coal-fired power station generator units are set to start supplying electricity worldwide in 2026 as China continues to develop ...

However, China still needs to turn the massive renewables buildup into power generation, replace fossil fuels,

China Gas-fired Solar Power Generation

and reach the "tipping point" so as to ...
