With installations surging across major markets and China driving the charge, 2025 is on track to be another record-breaking year for solar power.

In 2024, China added 277.57 GWAC of new PV capacity, representing a 28% year-on-year increase from the previous year's high base. Utility-scale installations accounted for 159.39 GW (up 33% year ...

Reducing carbon footprint of PV products is critical for policy design. Over recent decades, China has risen to a preeminent global position in both solar photovoltaic (PV) adoption and ...

Structural PV & BIPV 2.0: Flexible tandem tech allows for the integration of high-efficiency power generation into curved architectural surfaces and skyscrapers, moving beyond traditional 'bolt-on'; ...

China's National Energy Administration (NEA) reported 11.04 GW of new solar capacity in July, down about 48% year-on-year. Even so, additions ...

China is now building at even higher elevations in mountain valleys on the Tibetan Plateau, although with smaller solar farms. Near Lhasa, the ...

Today, China's share in all the manufacturing stages of solar panels (such as polysilicon, ingots, wafers, cells and modules) exceeds 80%. This is more than ...

Since early 2024, China's module manufacturers have been fighting for survival amid brutal market conditions. At the recent SNEC expo in ...

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic ...

China s next generation photovoltaic panels

To meet China's goal of carbon neutrality by 2060, substantial investment in upgrading power systems needs to be made to optimize the deployment of new photovoltaic and wind power ...
