The following table describes these three frequencies, by pros and cons, use, and types of equipment. The types of equipment are described further in Appendix A.

A base transceiver station (BTS) or a baseband unit (BBU) is a piece of equipment that facilitates wireless communication between user equipment (UE) and a network. UEs are devices like mobile phones (handsets), WLL phones, computers with wireless Internet connectivity, or antennas mounted on buildings or telecommunication towers. The network can be that of any of the wireless communication technologies like GSM, CDMA, wireless local loop, Wi-Fi, WiMAX or other wide area network (WAN) techn...

This article will provide a thorough outlook on base station antennas from working principles, applications, installation and maintenance details and ...

Note: A typical Radio Communications System consists of a base station, handheld portable radios, vehicle units, antennas, power supplies, controllers, electrical panels, computers, pagers and other ...
