Many telecom cabinets are located in remote sites, requiring them to operate on battery, solar, or wind power. In these cases, a cooling solution ...

This strategy combines cabinet-level airflow components with unique multi-adjustable-vent air conditioners (MAVACs), which are suitable for the co-deployment of ...

Advanced thermal cooling and system control enables remarkable savings both in capital and operational expenditures. The flexible rectifier system ...

With the zero-footprint site solutions, all the equipment can be installed directly on a mast or a wall, eliminating the need for air conditioning ...

Intelligently regulated fan speed, auto-reduced noise with the heat load, and available linkage with the fresh air of the base station. High reliability, ...

As the two most mainstream cooling methods for communication cabinets, air conditioners and fans must be selected to accurately match equipment ...

Thermoelectric cooler assemblies designed for harsh and remote environment applications, including electronic cabinets and ...

These compact cooling systems can effectively cool telecom hardware through convection, conduction, or ...

Cooling below ambient is necessary to extend the life of back-up batteries, and temperature stabilization is required to maintain peak performance. Many base stations and cell phone ...
