September 2021: A few weeks after Phase 2 of Moss Landing Energy Storage Facility went online, Phase 1 experienced a battery module ...

As battery energy storage systems expand, recent fires and explosions prove compliance isn't enough. James Close and Edric Bulan say ...

This webpage includes information from first responder and industry guidance as well as background information on battery energy storage systems ...

Following a lithium-ion battery fire at the Moss Landing plant in Monterey County in California, communities nationwide are expressing concerns about hosting similar plants.

When battery energy storage facilities burn, the makeup of the chemical fallout can be a mystery for surrounding communities. Yet, these batteries often contain metals that are toxic to...

This study provides precise scientific evidence for setting fire detection and ventilation conditions of lithium-ion battery packs in energy-storage cabins, offering significant theoretical and ...

These findings contribute to a deeper understanding of gas explosion hazards in prefabricated energy storage cabins and provide essential insights for enhancing the safety design ...

The report is a culmination of a two-year research project examining the characteristics of fires resulting from the overheating of lithium-ion battery ...

A major fire at one of the world's largest battery storage plants in Northern California sent up flames of toxic smoke. The fire that started Thursday and was ...

There are a lot of benefits that energy storage systems (ESS) can provide, but along with those benefits come

# Energy storage battery enters the cabin

some hazards that need to be considered. This blog will talk about a handful of ...
