The project is located in Kanepi, Estonia, with a total installed capacity of 12MW. It uses SunEvo N-type bifacial solar modules (half-cell design) and 330kW inverters.

Once operational (expected Q3-Q4 2026), the hybrid system will enable BREP to store solar production and deliver key grid-stability services, including Frequency Containment Reserve (FCR), automatic ...

Our wind and solar energy parks are the perfect solution for those who want to make a positive impact on the environment. With our state-of-the-art solar farm ...

This policy landscape, combined with its goal of reducing dependence on imported fossil fuels, creates a favorable environment for investment in both generation and storage solutions. Wind ...

The European Investment Bank (EIB), together with local commercial banks SEB and Luminor, is lending the Estonian renewable energy company Sunly EUR62 million to build and operate a ...

An Energy Storage + Diesel Generator hybrid solution combines battery-based energy storage with traditional diesel generation to create a more efficient, reliable, and cost-effective power system.

This study focuses on solar irradiance and energy generation potential in different regions of Estonia as a case study. Techno-economic analysis of possible solutions to use differently ...

Estonia has emerged as a key player in Europe's renewable energy landscape, with solar photovoltaic (PV) system manufacturers driving innovation and sustainability. This article explores the strengths of ...
