ESS can store energy for later use, meaning that sun or wind energy can be stored until it is needed for consumption. ESS can come in a variety of forms, including (but not limited to) pumped hydro, ...

About the project BEST-Storage aims to achieve the goal of peak load reduction and shifting, energy saving and energy cost minimization. Long and short-term high-energy density storage solutions will ...

Central and Eastern Europe is at an energy crossroads. To meet the EU Renewable Energy Directive's binding target for 2030 - a 42.5% share of renewables in energy consumption - ...

The European Commission must adopt an Energy Storage Action Plan within a broader Flexibility Package, to harmonise markets, remove regulatory barriers, and ensure storage is integral ...

Energy Storage Europe engages with leading stakeholders across the energy sector to explore the ideas driving Europe's energy transition.

Asia/China: The Post-Mandate Era China's storage landscape has undergone a fundamental transformation. In early 2025, the National Development and Reform Commission issued policy ...

This publicly accessible tool allows users to explore projects by technology type, location, scale, and status-offering deep insights into how storage supports the EU's energy transition.

The scheme supports solutions related to energy storage, sector coupling, agrivoltaics, distributed renewable generation and other technologies with low levels of commercial deployment. ...

This report therefore focuses on regulatory barriers to the development of solar, wind, pumped hydro storage, and grid infrastructure, as well as related business models.
