The Electricity Storage Policy Framework presents 10 government actions to support the role of electricity storage systems in Ireland's energy transition, identifying the key stakeholders and ...

Energy storage systems are vital to Ireland's renewable ambitions. Learn how batteries, long-duration storage and grid upgrades will help deliver clean power

We currently have more than 300MWs of battery storage capacity in operation in Ireland, making it one of the largest battery portfolios in Europe. We plan to ...

By participating in the Irish day-ahead energy market, energy storage can reduce day-a-head carbon emissions by 50% by using long-duration storage technologies. This makes a material contribution to ...

"The battery units, known technically as energy storage power stations, are now fully integrated into the real-time electricity market helping to manage supply and demand more efficiently ...

Dublin's growing demand for renewable energy solutions has made photovoltaic (PV) systems with storage capabilities a hot topic. This article explores how customized solar energy storage systems ...

The updated scheduling and dispatch program allows battery energy storage systems (BESS) to be fully integrated into Ireland's real-time ...

Using focus groups and a survey with the renewable energy and storage sector, we document perspectives on the critical barriers, innovative solutions and policy gaps identified by ...

To move past "wind when it's windy and solar when it's sunny," we need flexible storage that can shift clean energy to when it's needed. This is no ...
