---

A team led by Kazunari Matsuda at Kyoto University has, for the first time, created an atom-thin heterostructure in which the bulk photovoltaic effect ...

Although earlier experiments have detected signals transmitted from orbit, the OHISAMA project aims to be the first in the world to deliver solar power to a receiving site on Earth and convert...

Japan is spearheading the development of two promising technologies to make optimal use of both the Earth and space and ...

A Japanese industrial designer devised floating solar panels with generative design to harvest renewable energy where well-lit land is not readily ...

In Japan, we are steadily approaching the establishment of a society where photovoltaic power generation is introduced on a mass scale, but various ...

Japan is a leader in solar PV innovation and is now looking to grow its industry further amid US-China tensions and a shift to renewables. The country has been investing in floating solar ...

This technological advancement is a collaboration between the Japanese green tech startup PXP Inc. and Tokyo Gas Co., aiming to enhance solar power generation capabilities and ...

Discover Japan's renewable energy breakthrough with the first titanium solar panel--1000 times more powerful than conventional cells.

An adviser at the Japanese research institute Japan Space Systems, Koichi Ijichi, shared details about the country's plans to make a mini ...

# Japanese experts make their own solar power generation

Although it originated in Japan, foreign companies with huge investments have taken the lead in development, and the Japanese government ...
