Andrew Vanderburg, astronomer and NASA Sagan Postdoctoral Fellow at The University of Texas, Austin, explains the ...

In a joint teleconference today, NASA and Google announced the recent discovery of an eighth planet orbiting the Sun-like star Kepler-90, located some 2,500 light-years from ...

It's the largest number of worlds ever discovered in a planetary system outside our own. The star known as Kepler-90, is just a ...

Kepler-90 is a G-type main-sequence star located 2,545 light years away from Earth in the constellation Draco. It is most notable for its planetary system of eight planets, equal to to the ...

Scientists have discovered the first planetary group as large as our Solar System, with eight planets orbiting its star. Kepler-90, a Sun ...

Kepler-90 i is a super Earth exoplanet that orbits a G-type star. Its mass is 2.3 Earths, it takes 14.4 days to complete one orbit of its star, ...

OverviewPlanetary systemNomenclature and historyStellar characteristicsSimilar starsKepler-90 is notable for sharing similarities with the planetary system of the Solar System, in which rocky planets are nearer the star and gas giants farther away. The six inner planets range from super-Earths to mini-Neptunes in size. The two outermost planets are gas giants. The most distant known planet orbits its host star at about the same distance as Earth from the Sun.

NASA has announced the discovery of the eighth planet in the Kepler-90 star system, making it the only known one with as many ...

Do other stars have planetary systems like our own? Yes -- one such system is Kepler-90. Cataloged by the

Kepler 90 solar system nasa

Kepler satellite that operated from Earth orbit between 2009 and 2018, eight ...
