-----

Scientists from the Southern University of Science and Technology in Shenzhen jointly with the Hunan University of Technology have developed an innovative method for recycling spent lithium ...

By bridging the gap between academic research and real-world implementation, this review underscores the critical role of lithium-ion batteries in achieving decarbonization, integrating ...

South 8 Technologies, a San Diego-based innovator, has taken a bold step toward redefining lithium-ion battery performance with its patented LiGas<sup>®</sup> cell technology. The company ...

Japan: Scientists use manganese oxide to build better cathodes in lithium-ion batteries The research bridges electrochemistry and solid-state physics, establishing a new paradigm for distortion ...

In Skellefte<sup>®</sup>, Ett will produce lithium-ion NMC battery cells for a broader range of customers, including battery energy storage systems (BESS), automotive, and other mobility markets.

A surprising breakthrough could help sodium-ion batteries rival lithium--and even turn seawater into drinking water. Scientists discovered that keeping water inside a key battery material ...

62 Milverton rd, Raiwaqa, Suva Phone: 338 7982 / 931 1681 / 9219244 / 8765956 Follow Us:

Researchers in Hong Kong and China have developed a new form of battery that is more eco-friendly and longer lasting than lithium ion batteries - and it runs on tofu brine. The new water ...

A group of Clemson University chemists, led by Professor Sourav Saha, has developed new dual-conductive materials that simultaneously transport lithium ions and electrons, a unique combination ...

Northvolt Labs in V<sup>®</sup>ster<sup>®</sup>s will continue development of long-life lithium ion NMC cells and will collaborate with the Lyten Silicon Valley team to industrialize Lyten's lithium-sulfur battery ...
