---

Analysis by NREL shows that solar energy systems, when paired with 14-day long duration energy storage (LDES), can outperform military-grade ...

Fixed bases have more flexibility to focus on energy efficiency and shift the technology focus to solutions like long-duration energy storage, he said. ...

This article defines the concept of a Defense Energy Architecture that may guide the construction of microgrid systems to ...

This project aims to enhance energy resiliency and security by integrating a battery energy storage system with existing infrastructure, while ensuring minimal ...

Effectively integrating PV technology into current DoD energy systems has the potential to improve energy independence, redundancy, and assurance. However, PV technology has its own ...

The facility, which has almost 2 million solar panels installed, can produce up to 1,300 megawatts of power to the California Independent System ...

The Department of Defense (DoD) announced at Fort Liberty today, a first-of-its-kind partnership with Duke Energy to power five military installations ...

The PLA will fortify the overall security of military energy, accelerate the use of new energies in new types of weapons and equipment, new forms of combat forces and important military ...

To create fully independent and secure microgrids that are resilient to power disruption, protected against cyber attack, and reflect more sustainable energy practices, including greater efficiency, less ...
