An Element Management System (EMS) is a network management system that provides a comprehensive view of a telecom network, enabling operators to manage and monitor network ...

An element management system (EMS) consists of systems and applications for managing network elements (NE) on the network element-management layer (NEL) of the Telecommunications Management Network (TMN) model. As recommended by ITU-T, the element management system's key functionality is divided into five key areas - fault, configuration, accounting, performance and security (FCAPS). Portions of each of the FC...

Statnett is the system operator of the Norwegian power system, owning and operating the transmission grid and maintaining the balance between ...

We help to ensure reliable telecommunications networks and robust critical infrastructure in Norway. We deliver network solutions for the needs of the future and that contribute to digital inclusion in both ...

Inverter: Converts direct current (such as from solar panels) to alternating current for use by base station equipment. Uninterruptible power supply (UPS): Ensures that the base station can continue to work ...

Provide guidance for operating and defending afloat and shore network communications systems (to include Information Assurance Vulnerability Management (IAVM) and computer incident reporting).

During this year's Ulendt exercises, Telia demonstrated how a portable mobile base station can be flown into position using a drone, making it much easier to restore connectivity in ...
