-----

Early ramp-up of low-carbon hydrogen production, replacing fossil fuels in various applications. ons in virtually all parts of the global energy system. With a quarter of a century of CO2 storage operations, ...

We aim to manufacture leading edge supercapacitors for the global market. nanoCaps was founded Spring 2021 by researchers from the University of South ...

This article deals with the general concepts of new developments in production of high-value activated porous carbon from various types of wastes for use in supercapacitors.

Discover how supercapacitor modules are transforming industries with rapid charging, high efficiency, and eco-friendly performance. This guide explores applications, market trends, and why Oslo-based ...

The supercapacitor market in Norway encounters challenges related to the high cost of production due to the use of expensive materials like carbon and electrodes.

Why the Nordics Are Betting Big on Supercapacitors a wind farm in Norway generates excess energy during a stormy night, but instead of wasting it, the power gets stored in devices that ...

The main goal of the project is to develop an upscaled pilot production line for battery cells and supercapacitors. This includes small-scale ...

Information about Capacitor in Norway When exploring the capacitor industry in Norway, several key considerations come into play. The country's strong focus on sustainability and renewable energy ...
