The global wind market outside of China and the US demonstrates stability, with onshore wind keeping steady growth whilst persistent headwinds ...

Innovations in wind turbine design, consisting of larger and more efficient mills, floating offshore wind era, and AI-pushed predictive protection, are enhancing power output and decreasing ...

The Offshore Wind Market Report: 2024 Edition provides detailed information on the global offshore wind energy industry through Dec. 31, 2023, and tracks U.S. ...

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion ...

We expect Europe to install 187 GW of new wind power capacity over 2025-2030. The EU-27 should install 140 GW of this - 23 GW a year on average. This would bring total installations ...

Electricity markets in regions such as Europe face the prospect of increasing negative power prices over the coming years if policy, regulatory and technological measures are not taken to safeguard wind ...

Given the clear economic, social, and environmental advantages of wind power as a cornerstone of a renewable energy system, the main obstacles to progress today come not from ...

US wind installations will rebound in 2025, but the concern lies in the sharply downgraded 5-year outlook. We'll give you one guess why.

Solar PV alone accounts for over half of this increase, followed by wind (30%). The share of renewables in global electricity generation is projected to rise from 32% ...

Outlook for the share of wind power generation

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...
