---

That is, `2>& 1` indicates that file descriptor #1 (which you previously opened for appending using `>&&logfile`) is cloned into number #2. And yes, `2<& 1` works identically.

So does "`2>& 1`" and "`>&`;" have the same meaning or are they different in some way? Explanations about redirections seem to revolve around the difference between what each of them ...

I describe `2>& 1` as "redirected fd2 to whatever fd1 is currently using" -- subsequently redirecting fd1 does not affect what fd2 is using.
