Domestic substitution accelerates: The self-sufficiency rate of consumer electronics analog chips has increased from 15% to 30%, and leading companies have replaced European and ...

But here's the kicker: over 75% of insulated gate bipolar transistors (IGBTs) in photovoltaic inverters still come from foreign suppliers. With global supply chain tensions and tech ...

Driven by the growing demand for power electronics in industrial and consumer applications, domestic substitution of core semiconductor components has become a strategic priority. Facing requirements ...

Given their relatively high technical complexity, the domestic market is still dominated by overseas manufacturers, with MKS (USA) as a representative, indicating significant potential for ...

Research shared exclusively with The Washington Post reveals how deeply dependent U.S. power companies are on Chinese inverters. These ...

In the 7th-generation X series, the IGBT and diode devices that constitute the modules have been made thinner and miniaturized to optimize the device ...

Every solar panel and battery connected to the U.S. energy grid relies on a device few people ever consider: the power inverter. In May of 2025, ...

U.S. energy officials are reportedly reassessing the security risks posed by Chinese-made components in renewable energy infrastructure after ...

There is ample room for domestic substitution. Currently, only Star Semiconductor, a Chinese company that has made it into the top 10 global IGBT module manufacturers, holds only 2.2% of the global ...

Photovoltaic inverter IGBT chip domestic substitution

It can be said that regardless of how the US changes the chip tariffs on China, as long as China's countermeasure policy on origin certification ...
