-----

Nearly 50 GWdc are expected to come online in 2025, and almost 44 GWdc in 2026; then, annual installations will stabilize around 38-39 GWdc annually from 2027 to 2030. However, the ...

Global Manufacturing The United States manufactured approximately 15.7 GWdc of PV panels in H1 2025, up 126%, y/y, and 440% over the past two years. In Q3 and early Q4 2025, domestic ...

The IEA-PVPS 2025 Snapshot of Global PV Markets reveals a pivotal moment for solar power: global PV capacity surpassed 2.2 TW, with more than ...

For CELT 2025, the BTM PV forecast will be converted into 73 years of hourly forecasts, at the load zone-level, based on historical profiles of hourly capacity factors

Today in 2025, we're seeing commercially available panels reaching close to 750W, and early production modules already exceeding 760W, with ...

EIA projects that PV's growth in 2023 (27 GWac) and 2024 (36 GWac) will continue in 2025 (39 GWac) and remain at similar levels in 2026 (36 GWac). In 2024, 24 states and territories ...

The increase in solar PV capacity is set to more than double over the next five years, dominating the global growth of renewables. Low costs, faster permitting ...

Explore the future of solar in 2025--key trends, new tech, and policies driving global clean energy growth.

The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and ...

Will that trend continue in 2025? Power demand will continue to rise across regions due to the proliferation of data centres and growing electrification ...
