With the growing development of renewables in rural areas, concerns over the protection of agricultural lands have targeted utility-scale solar energy systems.

As shown in Map 1, roughly 18% of ground-mounted PV facilities in the U.S. were installed between 2021 and 2023, with a notable portion of these ...

In the last decade, solar has grown with an average annual rate of 26 percent, reaching a capacity of over 138 gigawatts in 2023. In that same ...

Between 2012 and 2020, 43 percent of solar farms and 56 percent of wind turbines in rural areas were installed on land that was in cropland prior to development.

The adoption of solar energy in rural areas has become a pivotal approach for promoting progress across various Sustainable Development Goals (SDGs). Rural areas, particularly in ...

This Market Intel will dive deeper into solar energy's expansion and economic impacts, particularly in rural America, where there is great tension between private property rights and ...

Driven by subsidies, mandates and federal and state policies compelling the use of more renewable energy, solar energy facilities are now displacing farmland at an increasing rate.

Large-scale solar energy installations are a relatively new form of development in many rural areas. Solar energy development can create clean ...

Agrioltaics are the co-location of ground-mounted rows of solar photovoltaic panels to produce electricity together with raising certain types of crops or livestock or providing pollinator ...

Photovoltaic panels installed in rural areas for 20 years

In the context of climate change and rural revitalization, numerous solar photovoltaic (PV) panels are being installed on village roofs and lands, impacting the enjoyment of the new rural landscape ...
