LiFePO4 batteries do not get damaged when left in a partial state of charge (PSOC). You can charge your LiFePO4 batteries after each use or when they ...

Learn the best practices for charging and discharging LiFePO4 batteries to extend their lifespan, ensure safety, and optimize performance.

Parallel connection of LiFePO4 batteries refers to connecting multiple batteries together by linking the positive to positive and negative to negative to increase ...

Discover possible causes and solutions to maximize performance and lifetime of your LiFePO4 battery.

Polarity: Connect the positive (+) terminal of the battery to the positive (+) terminal of your system, and the negative (-) terminal to the negative (-) terminal.

All RELiON LiFePO4 come with a BMS that protects the battery from over-temperature. If the BMS disconnects due to high temperature, wait until the temperature reduces before using or charging the ...

An example would be connecting the terminals of two 12V RB100s from negative to positive to achieve 24Volts. The batteries can also be wired in parallel, (connecting 2 or more batteries positive to ...

In this case, the positive terminals are connected together and the negative terminals are connected together of all the batteries until you reach your desired capacity.

If your LiFePO4 battery isn't performing as expected, the good news is that most issues can be easily identified and resolved. In this blog, we'll dive ...
