The levelised cost of electricity produced from most forms of renewable power continued to fall year-on-year in 2023, with solar PV leading the cost reductions, followed by offshore wind.

Discover how large energy users are turning to on-site power generation to offset rising capacity costs, improve reliability, and meet green goals.

Lawrence Berkeley National Laboratory collected feedback from U.S. solar industry professionals (Wiser et al., 2020). The wide range in reported prices depends in part on the maintenance practices that ...

Solar power costs in 2025 represent exceptional value for most homeowners, with system prices at historic lows and electricity rates continuing ...

NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems.

2026 Energy Technologies Area, Berkeley Lab OUR ORGANIZATION Lawrence Berkeley National Laboratory Energy Technologies Area Energy Analysis Division

Solar photovoltaic panel prices Average price of solar modules, expressed in US dollars per watt, adjusted for inflation.

These benchmarks help measure progress toward goals for reducing solar electricity costs and guide SETO research and development programs. Read ...

Total overnight cost for wind and solar PV technologies in the table are the average input value across all 25 electricity market regions, as weighted by the respective capacity of that type installed during ...

Is the price of solar panels falling? The price of solar panels has declined substantially over the last decade as

Solar PV Onsite Energy Prices

the industry has matured and reached ...
