-----

That expected growth is down from the record 37 gigawatts of solar power capacity that was added in 2024 and may dwindle further as some analysts believe that solar power may face ...

Wind energy infrastructure doesn't produce power if the air isn't moving, and solar doesn't generate power if the sun's not out. But that doesn't mean that either source of energy is...

The past decade was transformative for solar, with rapid cost reductions and subsequent increases in deployment. It is now possible to envision--and chart a path toward--a future where solar provides ...

Because energy supply facilities typically last several decades, technologies in these classes will dominate solar-powered generation between now and 2050, ...

Explore the future of solar in 2025--key trends, new tech, and policies driving global clean energy growth.

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

Overall, in 72% of the simulations done for robustness testing, solar makes up more than 50% of power generation in 2050. This suggests that solar dominance is not only possible but also...

Summary. Solar energy is a rapidly growing market, which should be good news for the environment. Unfortunately there's a catch.

While gas generation is in a renaissance, Groom says the U.S. solar boom of recent years has suddenly stalled. Indeed, the boom may already be ...

Is solar power going to take over the world? The past few years have seen a frankly astounding acceleration in the rate of its ...
