Online 3D simulation of the Solar System and night sky in real-time - the Sun, planets, dwarf planets, comets, stars and constellations

RD2 uses flat panels, with solar cells facing away from Earth and microwave emitters facing toward the Earth. RD2 generates power 60% of the year due to its limited capability to reposition itself or redirect ...

SpaceX and xAI propose that the long-term solution is to develop orbital data centers powered directly by near-constant solar energy.

3D Gravity Simulator. Simulate the solar system, exoplanets and even colliding galaxies. Add, delete and modify planets, and change the laws of physics.

Create your own star system, customize stars, planets and moons, and watch their orbital patterns!

Drag and drop planets, customize orbits, and watch your system come to life. Experience authentic orbital mechanics and gravitational interactions. Save your creations and explore systems built by ...

Space-based solar power (SBSP or SSP) is the concept of collecting solar power in outer space with solar power satellites (SPS) and distributing it to Earth.

Detailed descriptions of a star and its orbiting bodies. May or may not generate life-supporting systems. For reference, our solar system's star, called "The Sun", is a G-Type Main ...

Among these emerging technologies, Space-Based Solar Power (SBSP) stands out for its ability to consistently capture the Sun's energy, almost unaffected by the day-night cycle, while ...
