For energy-related applications such as solar cells, catalysts, thermo-electrics, lithium-ion batteries, graphene-based materials, supercapacitors, and hydrogen storage systems, nanostructured ...

Utility-scale energy storage company Energy Vault has begun constructing what will be the largest green hydrogen long-duration energy storage project in the U.S., located in Northern California.

As the photovoltaic (PV) industry continues to evolve, advancements in transnistria energy storage mobile power plant operation have become critical to optimizing the utilization of ...

Important parts of Moldova's energy infrastructure were built in Transnistria, including the power plant, meaning the country must rely on Transnistria for most energy needs, and by proxy, on Russia.

With aging Soviet-era infrastructure and political isolation complicating energy imports, local engineers have turned to photovoltaic (PV) systems and battery storage as their lifeline. In 2023 ...

The EnerC+ Energy Storage product is capable of various on-grid applications, such as frequency regulation, voltage support, arbitrage, peak shaving and valley filling, and demand response ...

The selected papers for this special issue highlight the significance of large-scale energy storage, offering insights into the cutting-edge research and charting the course for future developments in ...

The region's energy security currently hangs by a thread, relying heavily on imports and aging Soviet-era infrastructure. But here's the kicker: energy storage systems could become ...

Transnistria's storage systems combine lithium-ion batteries with something you wouldn't expect - repurposed electric vehicle (EV) batteries from Western Europe.
