**Tracker:** a support structure on which photovoltaic modules are installed that enables automatic adjustment of module orientation - basically, a tracker allows ...

A large bundle of solar cells can be wired together into a solar panel, or a cell can be chopped to pieces and fit into tiny gadgets like calculators and digital watches.

**Solar panel mounts** are the supporting structures that secure solar panels in place. The main purpose of a solar mount is to ensure solar systems ...

Rather than installing solar panels on your roof, a ground mount solar system is a system where solar panels are attached to a racking system with its foundation ...

A panel string is a group of -- typically 4-10 -- panels wired together in series, which then plugs into an input on a string inverter. Your solar array refers to all ...

In photovoltaic systems, a variety of different types of fasteners can be employed depending on their function and application scenario. Below, we ...

To boost the power output of PV cells, they are connected together in chains to form larger units known as modules or panels. Modules ...

**Busbars and fingers** If you look closely at the face of a solar panel, you'll see a grid of metallic lines. The thinnest lines are called fingers, and their ...
