As a widely recognized EU standard for companies involved in the design, manufacturing, and installation of steel structures, EN 1090 is often regarded as a "passport" to the ...

Use galvanized steel for utility-scale projects or areas with extreme weather. Choose aluminum for residential/rooftop systems or where weight is a constraint (e.g., older rooftops with ...

Rails and clamps are essential components of solar photovoltaic brackets, serving as the connectors that hold the solar panels securely in place. Rails are typically made of aluminum or ...

As the core load-bearing component of the photovoltaic support system, our C-shaped steel (also known as C-shaped purlin /C-channel) is specially designed and manufactured for the long-term stable ...

We are a physical factory specializing in the production of photovoltaic brackets, earthquake-resistant brackets, cable brackets, and punched C-shaped steel....

Imagine trying to build a skyscraper without steel beams. That's exactly what solar panels would be without robust mounting systems. This project isn't just about metal brackets; it's about redefining ...

Our brackets are made of high-quality hot-dip galvanized steel, which has strong corrosion resistance and can maintain long-term stability in harsh weather and environment, especially suitable for humid, ...

Stainless steel, distinguished by its chromium content, exhibits an intrinsic resistance to rust and corrosion, making it an excellent option for solar ...

Energy Steel's high-quality photovoltaic brackets are crafted to meet the demanding standards of the solar industry, offering both strength and ...

What kind of steel does CHINT Solar use for its photovoltaic brackets

The tracking photovoltaic bracket can adjust the angle of the photovoltaic module in real time according to the position of the sun, so that it is always facing the solar radiation, thereby ...
