In this article, we explain some of the key factors behind the industry's recent decline, offer three reasons why we believe the market's fundamentals are solid, and suggest what players can do ...

Global Manufacturing The United States manufactured approximately 15.7 GWdc of PV panels in H1 2025, up 126%, y/y, and 440% over the past two years. In Q3 and early Q4 2025, domestic ...

The industry continued breaking records and experiencing unprecedented growth, accounting for 66% of all new generating capacity added in 2024. All solar segments set annual ...

Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace ...

In 2023, the global weighted average levelised cost of electricity (LCOE) from newly commissioned utility-scale solar photovoltaic (PV), onshore wind, offshore wind and hydropower fell. Between 2022 ...

The International Renewable Energy Agency (IRENA) reports that, between 2010 and 2023, the global weighted average levelised cost of energy of ...

Of the total solar capacity installed in the U.S., over 26 percent corresponds to residential installations. This segment has grown in recent years, ...

Here we assess the cost savings from a globalized solar photovoltaic (PV) module supply chain.

IRENA reports that, between 2010 and 2023, the global weighted average levelised cost of energy (LCOE) of concentrating solar power (CSP) fell from \$0.39/kWh to under \$0.12/kWh--a decline of 70%.
