-----

Nevada-based NV Energy is deploying solar-plus-storage to generate half its electricity with renewables by 2030 and all of it by 2050. ...

This report is the seventh and final publication from the National Renewable Energy Laboratory's (NREL's) Storage Futures Study (SFS). The SFS is a multiyear research project that explores ...

Rooftop solar and battery storage can reduce energy costs and provide affordable back-up power for over 60% of US households, but benefits often bypass the high outage risk ...

We must transition to clean energy solutions that drastically cut carbon emissions and provide a sustainable path forward. The synergy between solar PV energy and energy ...

Growth of enabling energy infrastructure like storage could make a big difference in meeting the level of renewable energy needed.

Transitioning to renewable energy is vital to achieving decarbonization at the global level, but energy storage is still a major challenge. This review discusses the role of ...

The energy storage products provided by CSI Energy Storage will be used to support Aypa Power's 487 MWh standalone energy storage project in Southern California. The ...

Energy storage plays a critical role in optimizing the benefits of solar energy systems. It allows households and businesses to store excess energy generated during peak ...

During the first nine months of 2025, solar and battery storage have dominated growth among competing energy sources, according to ...
