Solar and wind accounted for 91% of new US electrical generating capacity added in the H1 2025, according to data just released by the Federal ...

Wind and solar developers often bring their projects on line at the end of the calendar year. So, the new capacity tends to affect generation growth ...

Interested in earlier trends and analysis of new power plant capacity? Check out our archive, illustrating how electricity generation has ...

In the first quarter of 2025, electrical generation by wind plus utility-scale and small-scale solar provided nearly one-fifth (19.0%) of the U.S. total, up ...

Each quarter, the National Renewable Energy Laboratory conducts the Quarterly Solar Industry Update, a presentation of technical trends within the ...

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly ...

In 2025, renewable energy sources supplied over a quarter of U.S. electricity, with solar and wind generation exceeding coal and nuclear, marking a major shift in the nation's power grid.

As of Dec. 31, the proportion of wind and solar power installed capacity to the total had increased to just over 47 percent. Wind and solar power surpassed thermal power in terms of ...

"The first quarter of 2024 set the pace for the year, underscoring both an industry that continues to break barriers and the increasing demand for clean energy solutions," said John ...

Wind and photovoltaic power generation in the first quarter

The Federal Energy Regulatory Commission (FERC) has reported a remarkable milestone in the U.S. energy landscape, revealing that solar and ...
