Electricity generation from solar, measured in terawatt-hours.

As a result of new solar projects coming on line this year, we forecast that U.S. solar power generation will grow 75% from 163 billion ...

Global solar generation grew by a record 31% in the first half of the year, while wind generation grew by 7.7%, according to the report by the ...

Since the 1950s, when the first solar cells were commercially manufactured, there has been a succession of countries leading the world as the largest ...

Solar was the fastest-growing power source (+29%) for the 20th year in a row. Solar electricity has doubled in just three years, providing more than 2,000 TWh of electricity in 2024.

Data on renewable power capacity represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable ...

The increase in solar PV capacity is set to more than double over the next five years, dominating the global growth of renewables. Low costs, faster ...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning ...
